Red Rock Capital's Systematic Global Macro program has historically exhibited low correlation to traditional asset classes. As Dr. John Lintner of Harvard University summarized back in 1983, "portfolios... including judicious investments... in managed futures accounts show substantially less risk at every possible level of expected return than portfolios of stocks (or stocks & bonds) alone."

During the Credit Crisis, Red Rock's Systematic Global Macro program produced extremely valuable diversification. MIT professor Dr. Kathryn Kaminski referred to this valuable potential benefit as "Crisis Alpha" in her 2011 study titled *In Search of Crisis Alpha*.
